Bringing Brain Sensing to Consumers

Integrating the core of human insights to make
smarter technology

CONFIDENTIAL

The Mind. Unlocked.

Harnessing the power of the human brain to create technology that truly serves humanity.

Functional Audio

When your brain is in the loop, *your headphones understand you* — opening an **entirely new frontier of personalized audio experiences.**

Productivity Reimagined

With a window into your brain, you **unlock your most productive self.** Neurofeedback becomes *your most powerful tool* to **perform at your best.**

AI Understands

Voice AI reaches its true potential when contextualized with the brain's unique ground truth: **intent.**

Your customers use your hardware for hours a day. Give them a better reason to never take it off.

Headphones, earbuds, eyewear, anything worn on the head sits in continuous contact with the user's brain. Until now, that contact produced nothing your product could use. Neurable's tech changes that — turning hours of passive wear into a closed feedback loop for productivity, fitness, gaming, brain health, and cognitive state.

WHAT THIS ENTAILS

-  Passive sensors blend into your form factor
-  Real-time brain-sensing works in the background
-  Feedback informs a software application platform

WHAT IT ADDS

- New features to interact and delight consumers
- Closed-loop feedback on brain state and performance
- Applications for productivity, fitness, voice AI, and music

14 years to make brain data work in the *real world*.

EEG never scaled. It required clinical rigs, controlled environments, and perfectly still subjects. Every attempt to go consumer-grade failed.

Neurable built proprietary AI that extracts lab-grade brain signal from headphones just like yours — while people move, talk, and live.

The barrier nobody else cleared is now the foundation for everything that follows.

**60+ Patents
Across Sensing
& Design**

We partner with you to unlock a brain-sensing platform empowering the products you already make.

Intuitive Voice AI

01

Add a cognitive input layer to **moto ai** to improve voice, UX, and hands-free control.

Leverage the cognitive signals for intent to generate more natural AI interactions (e.g. wake-work free, reduced errors, immersive listening)

Daily Wearable

02

A daily reason to wear your products and use your app.

Real-time brain data flows back continuously. Every session is a touchpoint. Every day, a reason to wear the earbuds and use the app.

Ecosystem Partner

03

Brain input layer creates unique functionality across full spectrum of devices

Fulfilling on Qira's promise of intelligence across every device, Neurable's signal provides the missing inputs — focus, intent, fatigue, stress, recovery.

Be one of the *first*.
The data compounds.
The *moat grows*.

Dive Deeper

We demonstrated Neurable's gaming solutions at CES 2026, to considerable delight from press and influencers.

We're now expanding into additional hardware partners to meet the demand across categories. We'd love to take you through our product, the integration and the commercialization model.
